## **ABSTRACT**

The design and construction of an E-Commerce Website for Medicines is demonstrated in this project. The primary goal of this project is to increase pharmaceutical store accuracy while also increasing safety and efficiency. This E-Commerce Site will make it simple for people to buy and trade pharmaceuticals. The pharmacy management system will be utilised to save time and money by storing drug details in a systemic manner so that the data can be accessed quickly. While personnel, money, paperwork, and other resources are reduced, the system is user-friendly and will assist the pharmacist. By maintaining and updating the Medicines, this system relieves pharmacists of their duty and makes the system more efficient.

This technology is intended to bridge the gap between customers and pharmacists by making it simple to search for and purchase medications. Many people are infected with COVID-19 and are unable to obtain treatment in their own country. This is an excellent option for folks who are hesitant to leave their homes to get medications. The E-Commerce Website is a complete workflow management system for dispensing that is meant to improve accuracy, safety, and efficiency. Many people still go to their neighbourhood pharmacy to get their prescriptions filled. Our goal is to assist such individuals by providing a secure and user-friendly interface.

## **ACKNOWLEDGEMENT**

We would like to showcase our collective appreciation and gratitude towards everyone who has contributed to the successful and complete accomplishment of our project "Pharma Man". The completion of this project would not have been possible without this undeniable large support. We would like to show a vote of thanks to our faculty, Dr. Archana T, for her continuous guidance, support, and mentorship which was central to the completion of this project within time. The lessons in this course have been instrumental in teaching us the significance of parallelization and its application in distributed systems for the completion of large-scale operations. We also would like to thank our Dean, for providing us with the resources needed and the ideal environment for the completion of the project. Finally, we would like to show our immense gratitude to VIT University, for providing us a platform where we could learn practical concepts and develop practical and real-world projects.

## INTRODUCTION

Many people still go out to their local chemist shop for purchasing medicines. Our target is to help those people by providing an interface that is safe and easily navigable. The People can easily register for an account or log in after which they can search for any medicine that is prescribed and easily view the photos. After which they can add the amount of meds to the cart and place their order. This 5 minutes process will save a lot of time for the buyers and gives them easy access to all products available. For the Admin, he/she can easily buy/sell their medicines on PharmaMan. They can add new medicines and edit the existing details as well. Admin can also view the pending orders for delivery and easily provide the medicines. Therefore to solve this kind of problem the urgent need is to develop a Pharmacy management system that will prove beneficial for the Pharmacy. By using this software we can purchase, sell the medicines very well, we can do cost saving and maintain inventory control. This system can help pharmacy, to handle the incomings and outgoings more smoothly and in a better way.

#### SOFTWARE/TOOLS/TECHNOLOGY USED

#### Software used

- 1. A Text Editor- VScode/Atom
- 2. MongoDB (locally run/cloud service)
- 3. Node.js

#### **Technologies Used**

#### **Frontend:**

- **a. HTML:** Hypertext Markup Language is the standard markup language for documents designed to be displayed in a web browser. It can be assisted by technologies such as Cascading Style Sheets and scripting languages such as JavaScript.
- **b.** CSS:Cascading Style Sheets is a style sheet language used for describing the presentation of a document written in a markup language such as HTML. CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript.
- **c.JAVA SCRIPT:** JavaScript (js) is a light-weight object-oriented programming language which is used by several websites for scripting the webpages. It is an interpreted, full-fledged programming language that enables dynamic interactivity on websites when applied to an HTML document.

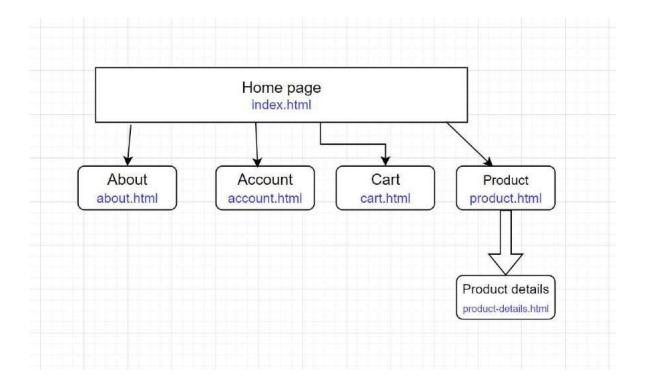

#### **Backend:**

- **a. Node.js:**Node.js is an open-source, cross-platform, back-endJavaScriptruntime environment that runs on the ChromeV8 engine and executes JavaScript code outside a web browser. Node.js lets developers use JavaScript to write command line tools and for server-side scripting.
- **b. Express.js:** Express.js, or simply Express, is a back-end web application framework for Node.js, released as free and open-source software under the MIT License. It is designed for building web applications and APIs. It has been called the de facto standard server framework for Node.js.

#### Database:

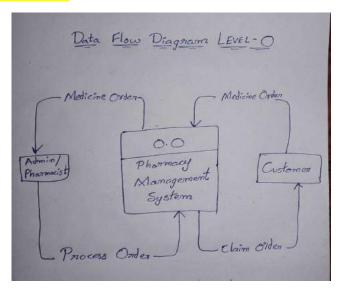

**a. MongoDB:** MongoDB is a general purpose, document-based, distributed database built for modern application developers and for the cloud era.
